RENERGEN DONATES FREE USE OF 20 CRYO-VACC UNITS TO HELP TACKLE POTENTIAL COVID-19 4TH WAVE

29 November 2021, Johannesburg, South Africa: Following **Cryo-Vacc's™** successful participation in the safe transport and storage of close to three quarters of a million Pfizer vaccinations in South Africa, it is becoming clear that the slower vaccine uptake in South Africa is causing a backlog to the distribution of vaccines, which is in turn placing pressure on the cold-chain logistics and storage of ultra-cold vaccines.

In light of the anticipated fourth wave about to grip the country, **Reenergen** is offering the use of 20 of its Jumbo Cryo-Vacc™ units at its own cost for the month of December 2021 to assist in ensuring safe transportation of the estimated 16 million doses required, from the main cold-storage facilities into the smaller vaccination sites across the country.

Said Stefano Marani, CEO Reenergen: “It is Reenergen’s strong belief that the level of comfort it can offer the public in ensuring that the Cryo-Vacc’s™ cold-storage chain is secure, unbroken, monitored and tracked, will offer the assurances required for people to step forward and get vaccinated to protect themselves and their loved ones, and help safeguard the citizens of our beautiful country in the fight against COVID-19”

This offer is open to any organisation currently involved in the Pfizer COVID-19 vaccine roll-out.

About Reenergen

Reenergen is an emerging producer of helium and liquefied natural gas (LNG), with existing production and sales of gas to buses in the Free State. Reenergen was listed on Johannesburg’s

AltX securities exchange in June 2015 as South Africa’s first listed alternative and renewable energy company. Reenergen listed on the Australian Securities Exchange (ASX) on the 6th June 2019, with the code RLT. Reenergen’s principal asset is its 100% shareholding in Tetra4, which holds the first and only onshore petroleum production right in South Africa, giving it first mover advantage on distribution of

domestic natural gas, along with the potential to become one of the major global helium suppliers, making South Africa only the 8th country in the world to export this extremely rare gas.
